REDBELLY DAO

REDBELLY DAO TASK SUBMISSION VIDEO ENTRY

Redbelly in Simple Terms

What Redbelly does and why it matters, in 88 seconds of everyday language. Made for a friend, a parent or a business owner who has never touched crypto.

FORMAT	LENGTH	RESOLUTION
Video, 16:9	88 seconds	1920 x 1080, 60 fps
CAPTIONS	**NARRATION**	**FACTS**
Burned in, plus SRT	215 words	16, verified 30 October 2026

FACTS LAST VERIFIED 30 OCTOBER 2026

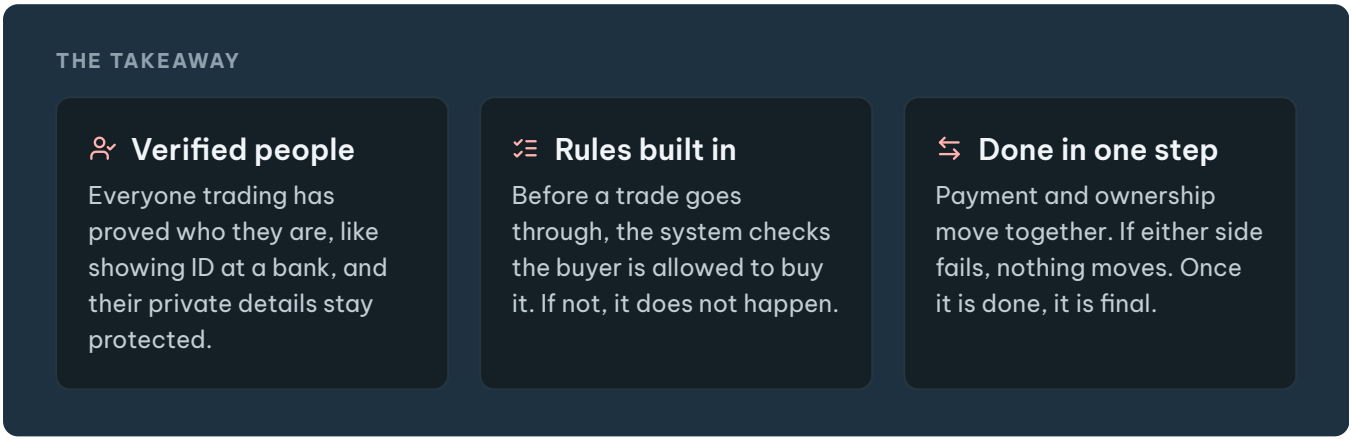

NOT POSTED PUBLICLY BEFORE JUDGING

01 THE ENTRY

Three ideas, said in plain words

The video opens with a question anyone has felt: a photo crosses the world in a second, so why does buying into a fund still take two business days? The answer is that the money and the record of who owns what live in different places, and different firms keep their own copies. Redbelly brings the two together.

From there the video makes three points, each with its own scene, and the close repeats them as the line a viewer will remember.

It then names the idea (tokenisation), shows what it is used for (property, loans, bonds and investment funds), and ends on where Redbelly comes from: research at the University of Sydney and CSIRO, and a place as one of three platforms that carried the Reserve Bank of Australia's pilot digital money in Project Acacia.

What is in the submission

`redbelly-in-simple-terms.mp4`	The entry. 1920 x 1080, H.264 and AAC, captions burned in
`redbelly-in-simple-terms.srt`	Captions as a separate file (SubRip)
`redbelly-in-simple-terms.vtt`	Captions as a separate file (WebVTT)
`sources.md`	Source list with every quote
`transcript.txt`	Narration as plain text
`verification-report.md`	Output of the automated checks
`redbelly-in-simple-terms-submission.pdf`	This document

All files are in the `submission/` folder of the repository. The companion website, `index.html` at the repository root, plays the video and carries the same material.

02 SCRIPT

Every word of the narration

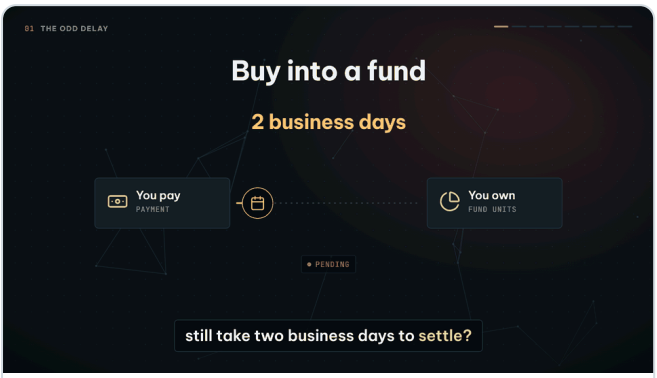

215 words in 21 lines. Timecodes are from the final cut. The chips show the facts each line relies on (section 04).

TIME	NARRATION	FACTS
0:00.6	You can send a photo around the world in a second.	F01
0:03.8	So why can buying into a fund still take two business days to settle?	F02
0:08.8	Because the money sits in one place, and the record of who owns what sits in another.	F03
0:13.9	Different firms keep their own copies, and someone has to check they match.	F03
0:18.7	Redbelly is a public network, built in Australia, that brings the two together.	F04 F05 F06
0:23.2	Payment and ownership move in one step.	F07
0:25.9	If either side fails, nothing moves.	F07
0:28.7	Once it's done, it's final.	F08
0:31.6	And it's not a free-for-all.	
0:33.5	The people trading are verified, a bit like showing ID at a bank, and their private details stay protected.	F09 F10
0:40.2	The rules are built in too.	F11
0:42.3	Before a trade goes through, the system checks the buyer is allowed to buy it.	F11
0:46.9	If not, it simply doesn't happen.	F11
0:49.8	So things like property, loans, bonds and investment funds can be issued and traded digitally, and settle almost instantly.	F12 F13
0:56.8	People call this tokenisation.	F14
0:59.5	Redbelly grew out of research at the University of Sydney and CSIRO, Australia's national science agency.	F05
1:06.9	And when the Reserve Bank of Australia trialled a pilot digital form of its own money, in Project Acacia, Redbelly was one of three platforms that carried it.	F15 F16
1:18.3	Verified people.	F09
1:19.8	Rules built in.	F11
1:21.2	Done in one step.	F07
1:23.0	That's Redbelly.	

03 STORYBOARD

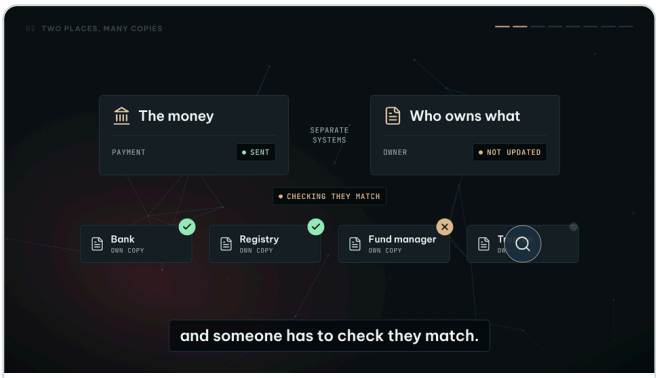

Eight scenes, one idea each

Frames taken from the finished video, with the burned-in captions a viewer sees with the sound off.

01 0:00.0 THE ODD DELAY

A photo crosses the world in a second. Buying into a fund sits at Pending for two business days. The gap between the two sets up the question.

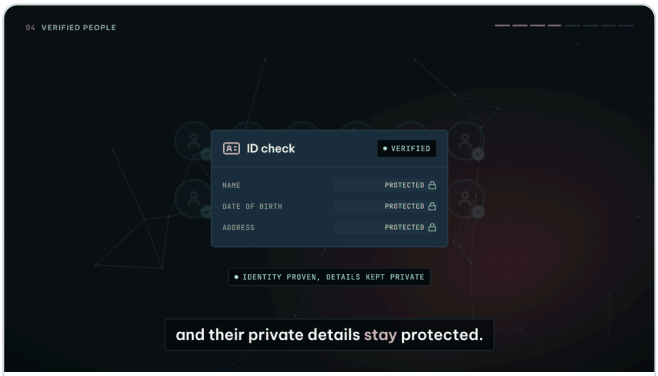

02 0:08.4 TWO PLACES, MANY COPIES

The money and the record of who owns what sit in separate systems. Four firms keep their own copies and someone checks they match. One does not.

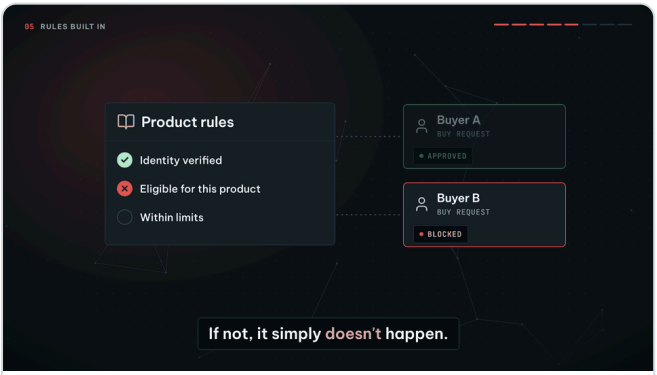

03 0:18.2 ONE STEP

Redbelly arrives. Payment and ownership swap in a single step. When one side fails, nothing moves. When the swap completes, it is final.

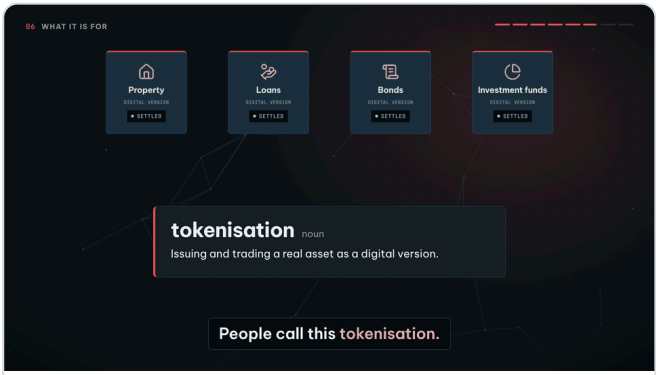

04 0:31.1 VERIFIED PEOPLE

A crowd turns verified one person at a time. An ID check shows that identity is proven while the personal details stay hidden.

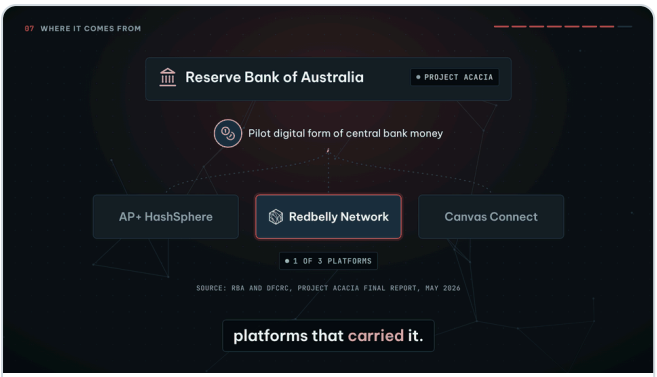

05 0:39.7 RULES BUILT IN

The product's rules run before every trade. Buyer A passes all three checks. Buyer B is not eligible, so the trade is blocked.

06 0:49.3 WHAT IT IS FOR

Property, loans, bonds and investment funds become digital versions that settle almost instantly. A dictionary card names the idea: tokenisation.

07 0:59.1 WHERE IT COMES FROM

Research at the University of Sydney and CSIRO leads to Redbelly. In Project Acacia, the Reserve Bank of Australia's pilot digital money ran on three platforms. Redbelly is one of them.

08 1:17.9 THE THREE IDEAS

Verified people. Rules built in. Done in one step. Then the logo, the web address and the date the facts were last checked.

04 FACT CHECK

Where every fact comes from

Every statement about Redbelly is backed by Redbelly's own public material or by the Reserve Bank of Australia. Quotes are copied from the source and an ellipsis marks words left out. Facts last verified 30 October 2026.

F01 **You can send a photo around the world in a second.** CONTEXT

Everyday comparison to set up the contrast. Not a claim about Redbelly.

F02 **Buying into a fund can still take two business days to settle.** CONTEXT

Today's typical settlement window for listed funds, as described by Tokeniser.

> "Every subscription, redemption and transfer remains unsettled for two business days in listed funds, and often longer in private assets."
> S5 TOKENISER (A REDBELLY NETWORK PROJECT)

F03 **The money and the record of who owns what sit in different places, and the copies have to be checked against each other.** CONTEXT

How settlement works today: cash and ownership records move separately and must be reconciled.

> "Today, cash and units move separately, and records are updated days later."
> S5 TOKENISER (A REDBELLY NETWORK PROJECT)

> "When the trade and the register update together, reconciliation is no longer required and settlement breaks are reduced."
> S5 TOKENISER (A REDBELLY NETWORK PROJECT)

> "The intricate payment waterfalls, inter-system reconciliations, and multi-party dependencies have traditionally limited transparency and liquidity."
> S8 REDBELLY NETWORK BLOG

F04 **Redbelly is a public network.** ABOUT REDBELLY

Described as public by Tokeniser and as public in the RBA report.

> "Is Redbelly a private network? No. Redbelly is a public network ..."
> S4 TOKENISER (A REDBELLY NETWORK PROJECT)

> "Pilot use cases were conducted on a range of public and private ... platforms, including ... Redbelly Network (public) ..."
> S9 RESERVE BANK OF AUSTRALIA AND DIGITAL FINANCE CRC, P. 12

F05

Redbelly was built in Australia and grew out of research at the University of Sydney and CSIRO, Australia's national science agency.

ABOUT REDBELLY

Origin stated by Redbelly and Tokeniser; joint venture listed in Redbelly's own timeline.

> "Developed at the University of Sydney and CSIRO, Redbelly Network's homegrown ..."
> S3 REDBELLY NETWORK

> "Redbelly was born from research at the University of Sydney and CSIRO, Australia's government science agency, with a patented consensus method built from scratch."
> S4 TOKENISER (A REDBELLY NETWORK PROJECT)

> "CSIRO ... Australia's national science agency worked alongside that research to take it from published papers to a network that institutions can run in production, under Australian governance."
> S7 TOKENISER (A REDBELLY NETWORK PROJECT)

> "Block8, CSIRO and University of Sydney create Redbelly Network as a joint venture with seed funding"
> S11 REDBELLY NETWORK

F06

Redbelly brings the money and the ownership records together in one place.

ABOUT REDBELLY

Redbelly describes its design as joining payments and asset records into a single system, which reduces reconciliation.

> "Its deterministic consensus unifies payments and asset ... into a single system, reducing reconciliation and enabling collateral mobility."
> S8 REDBELLY NETWORK BLOG

> "Establish digital registries as a shared source of truth across issuers, managers, and investors."
> S1 REDBELLY NETWORK

F07

Payment and ownership move in one step. If either side fails, nothing moves.

ABOUT REDBELLY

Tokeniser, which runs on Redbelly, exchanges cash and units in a single step or not at all.

> "On Tokeniser, cash and units are exchanged in a single step and the register updates simultaneously, or the transaction does not proceed."
> S5 TOKENISER (A REDBELLY NETWORK PROJECT)

> "Tokeniser gives you a familiar platform. Underneath it runs Redbelly Network ..."
> S4 TOKENISER (A REDBELLY NETWORK PROJECT)

F08 **Once it's done, it's final.** ABOUT REDBELLY

Deterministic finality: a confirmed transaction cannot be reversed.

> "Finality - Deterministic finality ensures transactions are confirmed once and cannot be reversed, providing certainty for financial markets"
> S2 REDBELLY NETWORK

> "Deterministic finality settles a transaction in a single round, final the moment it completes."
> S4 TOKENISER (A REDBELLY NETWORK PROJECT)

F09 **The people trading are verified.** ABOUT REDBELLY

Redbelly describes a network of verified participants, with verifiable credentials gating every holder.

> "A network of clean liquidity and verified participants enables structured products with clearly defined investor eligibility."
> S1 REDBELLY NETWORK

> "Accountability - Verified participants enable full auditability and clear accountability across all transactions"
> S2 REDBELLY NETWORK

> "Verifiable credentials gate every holder, enabling direct-to-investor distribution within your mandate."
> S4 TOKENISER (A REDBELLY NETWORK PROJECT)

F10 **Their private details stay protected.** ABOUT REDBELLY

Identity is verified while privacy is protected with zero-knowledge proofs.

> "Participants verify their identities, but their privacy remains protected through zero-knowledge proofs."
> S3 REDBELLY NETWORK

> "All users are verified using digital identities and zero-knowledge proofs (ZKP), ensuring compliance without compromising personal privacy."
> S12 REDBELLY NETWORK BLOG

F11 **The rules are built in. Before a trade goes through, the system checks the buyer is allowed to buy it. If not, it doesn't happen.**

ABOUT REDBELLY

Eligibility is enforced at the point of trade; trades that fail a check do not proceed.

> "A network of clean liquidity, combined with verifiable credentials enable tokenised investment products with defined investor eligibility, enforced at the point of trade."
>
> S2 REDBELLY NETWORK

> "Before any trade proceeds, the investor's identity, eligibility (including wholesale or sophisticated status where required) and your limits are verified automatically. Trades that fail a check do not proceed, and every check is logged."
>
> S6 TOKENISER (A REDBELLY NETWORK PROJECT)

F12 **Things like property, loans, bonds and investment funds can be issued and traded digitally.**

ABOUT REDBELLY

Redbelly lists these asset classes; the RBA report records funds, bonds and loan-backed securities piloted on Redbelly.

> "Treasuries & Bonds, Private Credit, Carbon Credits, Derivatives & Commodities, Insurance, Real Estate"
>
> S1 REDBELLY NETWORK

> "Redbelly provides the infrastructure to issue, manage, and distribute regulated digital financial assets to a global investor base."
>
> S1 REDBELLY NETWORK

> "Macropod piloted two use cases. The first use case tested issuance, trading and redemption of tokenised units in a wholesale managed investment scheme … The second use case tested a tokenised corporate bond … used in use cases: Redbelly Network."
>
> S9 RESERVE BANK OF AUSTRALIA AND DIGITAL FINANCE CRC, P. 61

> "NotCentralised piloted the structuring, issuance and management of a tokenised structured finance security backed by loans … used in use case: Redbelly Network."
>
> S9 RESERVE BANK OF AUSTRALIA AND DIGITAL FINANCE CRC, P. 61

F13 **They settle almost instantly.**

ABOUT REDBELLY

Settlement is described as quasi-instant, moving from two days (T+2) to the same day (T+0).

> "Settlement is quasi-instant. Deterministic consensus finalises a transaction in a single round, with finality the moment it completes."
>
> S4 TOKENISER (A REDBELLY NETWORK PROJECT)

> "Move from T+2 to T+0 settlement."
>
> S5 TOKENISER (A REDBELLY NETWORK PROJECT)

F14 **People call this tokenisation: issuing and trading a real asset as a digital version.** DEFINITION

Plain-language definition, consistent with how Redbelly and the Acacia pilot describe a digital twin of a real asset.

> "Asset issuers can issue and distribute products globally, with compliance built into the infrastructure"
> S2 REDBELLY NETWORK

> "... the consortium is mirroring a live digital twin of the real-world asset, the Wisr Freedom Trust 2025-1 ..."
> S8 REDBELLY NETWORK BLOG

F15 **In Project Acacia, the Reserve Bank of Australia trialled a pilot digital form of its own money.** ABOUT REDBELLY

The RBA and the Digital Finance CRC ran Project Acacia and issued a pilot wholesale central bank digital currency (wCBDC).

> "The use cases also explored multiple methods for settling tokenised asset transactions using different forms of public and private digital money, including traditional RBA exchange settlement account (ESA) balances, a pilot wholesale central bank digital currency (wCBDC), tokenised commercial bank deposits and stablecoins."
> S10 RESERVE BANK OF AUSTRALIA

> "The total value of pilot wCBDC issuance over the project was $4.4 million with individual transaction values of up to $250,000 seen in use cases."
> S9 RESERVE BANK OF AUSTRALIA AND DIGITAL FINANCE CRC, P. 13

F16 **Redbelly was one of three platforms that carried it.** ABOUT REDBELLY

The RBA final report names three platforms used with pilot wCBDC: AP+ HashSphere, Canvas Connect and Redbelly Network.

> "Use cases used three of the short-listed ... platforms for their experimentation with pilot wCBDC: Australian Payments Plus's (AP+) HashSphere instance ..., Canvas Connect ..., and Redbelly Network ..."
> S9 RESERVE BANK OF AUSTRALIA AND DIGITAL FINANCE CRC, P. 13

05 CHECKS

The brief, point by point

85 of 85 automated checks pass. The checker is `src/checks/verify.py`; its full output is `verification-report.md`.

● MET

Someone with no crypto knowledge understands it after one watch

One everyday comparison opens the video: a photo arrives in a second, a fund takes two business days. Everything after that answers why. The ID-at-a-bank comparison carries the identity idea. The video uses none of the usual jargon, and the checker scans for it: no crypto, token, wallet, node or consensus.

● MET

Original, memorable and easy to share

The whole explanation lands on three short ideas that the close repeats: verified people, rules built in, done in one step. Captions are burned in for sound-off viewing on X. The music, sound and animation were all made for this entry.

● MET

Every fact about Redbelly is correct

Every statement about Redbelly maps to a fact in the fact sheet, and every fact carries a quote from Redbelly's own material or from the Reserve Bank of Australia. The checker re-fetches each source and confirms each quote is still on the page.

Failure criteria

CRITERION	STATUS	HOW IT IS AVOIDED
The banned word or a stand-in appears anywhere	● CLEAR	Scanned in the narration, the captions, every piece of on-screen text, this site, the PDF and every file in the repository. The usual stand-ins and abbreviations are checked as well.
Any factual error about Redbelly	● CLEAR	16 facts, each tied to quotes from public Redbelly, Tokeniser and Reserve Bank of Australia material, last verified on the date below.
Entry posted publicly before judging	● CLEAR	The video has not been posted on X or any other channel. The DAO posts the winner.
Price talk, investment advice or promises of returns	● CLEAR	None. The script never mentions a token, a price, a yield or a return, and the checker scans for them.
Unlicensed music, images or footage	● CLEAR	No stock media at all. Music and sound are synthesised in code, the animation is drawn in code, and fonts, icons and logos are used under the licences listed in CREDITS.md.
AI generated text submitted without checking	● CLEAR	Every line was checked against the sources in the fact sheet. The final audio is transcribed and compared word for word with the script, so the voice cannot add or change a word.
Personal credit inside the deliverable	● CLEAR	No names, handles, signatures, watermarks or made-by lines in the video, the captions, the site or the PDF.

06 PRODUCTION

How it was made

Everything is built from source in the repository, so every frame and every sound can be rebuilt and inspected.

Script	21 lines in src/script.json, each tagged with the facts it relies on. Written to be read aloud: one idea per sentence.
Voice	Chatterbox Turbo, an open-weights voice model under the MIT licence, with its built-in voice. Four takes of every line. Each take is transcribed with Whisper and only takes that match the script word for word can be chosen. The chosen takes are slowed by 5 percent with Rubber Band, formants preserved, for an easy pace.
Music and sound	Composed in code in src/audio/music.py: warm pads, a plucked arpeggio, bass and light percussion at 96 BPM. The groove lands on the Redbelly reveal. Sound effects are synthesised the same way. The music ducks under the voice and the mix is mastered to -14 LUFS.
Picture	Eight HTML and SVG scenes in the DAO Task Board palette and type. Each frame is a pure function of time, rendered in Chromium at 1920 x 1080 and 60 frames per second, then encoded with x264.
Timing	Every animation and sound effect is anchored to a spoken word, using Whisper word timings, so the picture moves when the voice says the word.

Licences

No stock footage, photos, music or samples. The voice model is MIT licensed. Music and sound effects are synthesised in code for this entry. Be Vietnam Pro and JetBrains Mono are under the SIL Open Font License. Icons are Lucide, under the ISC licence. The Redbelly and Redbelly DAO logos come unaltered from the official brand kits. Full details are in `CREDITS.md`.
